Salary Range: \$4731-5753/\$5196-6316 Number of Vacancies: 1

**This is an exciting job opportunity with the Franchise Tax Board working on the California Child Support Automation System Project. The successful candidate will work with a group of Technical Architects and Specialist to architect, design, build, and maintain a state of the art technology infrastructure.**

## Job Description:

Under general direction and supervision and leadership of the Systems Management Section Manager, the incumbent will receive direction, training and leadership through the Lead Technical Architect. The incumbent is expected to work independently and as part of Project Teams using a variety of systems management technology skills and apply these skills to solve business and technological problems. The incumbent will work closely with other members of the Systems Management Section and Business Partners to help define and document architecture, requirements, designs, processes, and procedures related to monitoring and maintaining system performance. The SSS is responsible for systems performance and capacity management activities, including identifying implementing and verifying system performance control tools and processes for monitoring, measuring, reporting and providing problem determination. The SSS may be assigned as a technical specialist to participate with specific project teams requiring knowledge of their discipline.

Daily tasks may include monitoring, testing, and tuning; software products, the application code, network components, the operation hardware, and databases for performance and failures. Conducting and coordinating performance, benchmark, and stress testing to validate, verify, and identify system performance and capacity issues. The successful candidate will have worked in a complex enterprise system environment that will have included products similar to WebSphere Application Server, EAI Tools, DB2, Hyperion (formerly Brio), IBM Content Manager, Hibernate, and MQ Series. The successful candidate will have worked in a complex multi tiered environment that has multiple large scale UNIX systems, a large scale SAN or storage subsystem, and multiple Windows Servers working in a cohesive environment.

## Required Knowledge, Skills, and Abilities:

- Experience with systems performance management and problem determination using system monitoring products
- Experience with system administration or database administration in a large enterprise computing environment
- Experience analyzing and tuning application code using JAVA and SQL
- Experience with systems performance management in a distributed environment
- Strong interpersonal and communication skills, and ability to work successfully in a team environment while demonstrating initiative and independence
- Strong organizational skills and ability to successfully manage concurrent assignments
- Strong documentation and writing skills.

## Desirable Experience / Qualifications:

- Familiarity with Large Scale UNIX systems and configurations in support of web and database systems (e.g. IBM pSeries, IBM SP2, HACMP)
- Experience using performance testing tools such as Mercury Loadrunner.
- A broad knowledge of all technical disciplines required to support a mission-critical system
- Experience performing critical analysis on technical documents
- Ability to effectively communicate technical information to a non-technical audience
